Re: 2400 block N. East Ave. - Milk in storm box?

On Monday October 12, 1992, I received a call from the Street Dept. (Cybil Brown) and said that they had a complaint of the storm box having a bad odor at 2441 N. East (Connie Lillard's home). I told Cybil that I was out there last week on a complaint from 2446 N. East, and told her what I had found. I told her that there wasn't much I could, that we do sanitary sewer and that if this was related to sanitary sewer then we could do something. Cybil also was wondering if the storm box & ditch needed to be cleaned out. I told that it did.

I called Bob Schaefer about the problem and he suggested that we have Hiland run water down the storm box. I told Bob that I was going to Hiland to put in a sampler and that I would have Lonnie Parmenter, plant manager at Hiland, go down to East Street with me and look at the problem.

I talked to Lonnie Parmenter at 9:00 A.M. We went to East St. and looked at the storm box. It was dry. Connie Lillard came out and we talked about the problem. It looked like to us that the storm box needed to be cleaned out behind Lillard's home. Mrs. Lillard thought that if the storm box was cleaned out and then water flushed through it that would do more good. Mr. Parmenter thought the same thing. He stated that if the City could clean out the storm box and the ditch, then he would run water down the storm box.

I returned to the office and called Cybil. I told her about what I had found and that if they could clean the storm box and the ditch, that Hiland would flush the line. She said that she would get with Jim Barber and Jack Glenn and arrange to have that worked scheduled.

I also called Ann Fearman, Health Dept., and told her about what was going on so that if they had any more complaints they would be aware that something was being done.
